case data
cases, attributes, timestamps
BPIC14: incidents at a bank's service desk
roles, pre-specified
predictor f
free field g
benchmark B_0
(Section 5.2, Table S20)
design space $\mathcal{S}$
pipeline × split × quality × baseline × metric
(Definition 1, Table 2)
the surface
$s \mapsto V_s(f)$
one increment per cell
(Equation 1)
three sets of specifications (Section 4.2)
declared | computed | bootstrapped — each claim states which one it covers
decomposition
which choice moves the answer, with the split as an error stratum
Section 4.4, Table 4
simultaneous band
max-t over the whole family the claim ranges over, coverage measured
Sections 4.3, 9.2
region and ρ
where the sign is determined, with the counts and a minimum resolved share
Definition 3, Table 3
reporting standard
the minimum form a claim must carry, and the package that emits it
Section 11; S22
